CLEAN  
FOG

Clean Fog is a machine that cleans your house, workplace, vehicle, daily use areas, toilets and sinks with the desired disinfectant usage, deactivating bacteria and viruses. It is one of the most important method to protect from pandemics that are effective today and diseases that are released as a result of our world becoming increasingly polluted. The hygiene and cleanliness of your environment is very important for human health. At this point, you can easily get rid of all the dirtiness that may occur in your areas of use with Clean Fog.

In environments where liquid is discarded in a liquid form similar to sprinkling, it is likely to cause damage to your devices. The most important feature of Celan Fog is that it works with a system called cold fogging, and it combines liquid and air and breaks down liquid liquid between 0-49 micron thanks to its ceramic nozzle. This has been tested and approved for many years. The products, which have been created due to a pandemic that has not been on the market before, do not meet these requirements.

# USAGE AREAS

- ✓ City Halls
- ✓ Military Buildings
- ✓ Local Authorities
- ✓ Farming Areas
- ✓ Greenhouses
- ✓ Printing Centers
- ✓ Hotels
- ✓ Schools
- ✓ Hospitals
- ✓ Food Production Centers
- ✓ Factories and Depots
- ✓ Trains
- ✓ Planes
- ✓ All Mass transportation vehicles
